

YOU WON'T REACH THE WINNER'S CIRCLE IF YOU CAN'T REACH THE TRACK.

Virtually no type of service is harder on diesel engine oils than stop-and-go towing applications. The tremendous heat generated can lead to accelerated rates of oil oxidation, deposit formation and engine wear. And an overheated drivetrain can literally set your rig on fire. Don't take that risk. Use AMSOIL motor oils and gear lubes in both your race car and your truck.
