

# Allison Transmission Owners Finally Have a Choice!

*Same Quality, Same Performance, Lower Price*

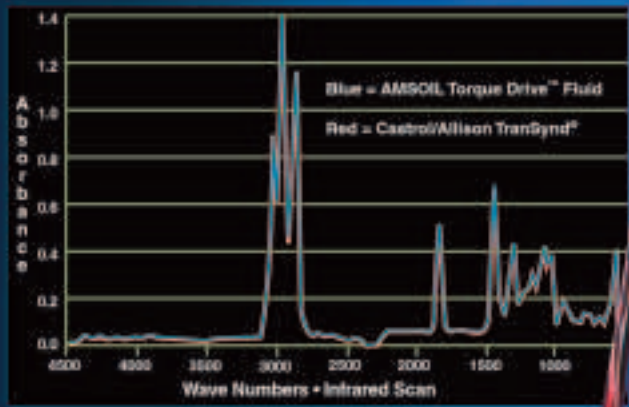

Replace TransSynd® with AMSOIL Torque-Drive™ worry free! That's because AMSOIL Torque-Drive™ is based on the same type of chemistry as TranSynd®. Through reverse engineering, AMSOIL chemists successfully disassembled TranSynd® and then built Torque-Drive™ using the same type components. Both products are made with PAO synthetic base oils, both contain an enhanced additive system, and neither contains VI improvers. Not even sophisticated lab equipment can tell these products apart. An infrared scan of the two products and a comparison of their physical properties and additive components show no measurable differences.

What this means is that you finally have options. Torque-Drive™ is recommended by AMSOIL for use in Allison, GM, Ford, Voith, and ZF transmissions specifying TES-295, C-4, Dexron® III, Mercon®, and TE-ML 14C. And AMSOIL backs Torque-Drive™ by a written warranty against lubricant-related failures.

Torque-Drive™ reduces wear, extends transmission life and drain intervals just like TranSynd® yet it costs less. Check out our low prices and compare.

**Choose Torque-Drive™, the AMSOIL Alternative**

*The only difference  
you'll notice is the price.*

*The First in Synthetics®*
