High Efficiency Oil Filter

AMSOIL INC. has introduced a premium, high efficiency cartridge oil filter utilizing nanofiber technology for Ford 6.0 L diesel engines from 2003-2006. The new EaO-88 filter system uses advanced submicron full synthetic media to provide an efficiency of 98.7% at 16 microns, the company said. The unit features a rigid construction due to a polymeric center tube and end caps, along with a proprietary composition incorporating special grade nanofiber synthetic media. This enables the filter to last up to one year or 25,000 miles when used in conjunction with AMSOIL synthetic motor oil. AMSOIL said an additional benefit of the synthetic filter media is that the oil is delivered to key engine components more quickly, enhancing the lubrication during cold weather starts.
