

By-Pass Filter Installation

2004 Chevy Silverado 1500
2wd, 5.3L

As you can see, the installation is quiet simple. A piece of 1/8 inch-thick flat stock metal cut approx.10" long by 3 1/2" wide and was drilled and tapped for 5/16 bolts. It was mounted on the driver's side transmission crossmember. The hoses were routed back to the oil filter port and connected using 90 connectors, hoses were then tie-strapped together all the way back to the remote filter location. EaBP-90 and EaO-15 filters were used for this installation.
