

2005 Chevrolet Silverado

AMSOIL Dual Remote Filtration System
Submitted by Ron Fisher

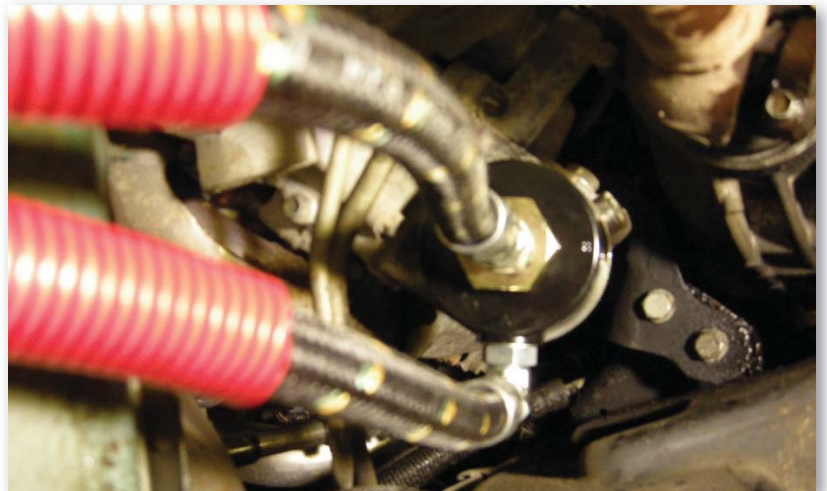

FILTERS REMAIN SAFELY ABOVE THE BOTTOM OF THE FRAME WITH THIS BRACKET LOCATION.

BY-PASS UNIT INSTALLED WITH OPTIONAL OIL SAMPLING PORT (BK13).

The Dual Remote Filtration System (BMK27) was installed on a 2005 Chevrolet Silverado with a 6.6L Duramax engine. Despite the many parts that come with the kit, anyone with a reasonable amount of do-it-yourself skills can install this unit.

To start, I mounted the brackets on the lip of the frame in an area that provides easy access to the filters and the oil sampling port (BK13) while keeping the filters protected. Routing the oil lines was pretty simple. I decided to wrap them in fire-retardant plastic wire conduit to protect against abrasion. I completed everything with a couple hours of work. The truck has 103,000 miles on it and I'm looking forward to a long time between oil changes.

PLASTIC CONDUIT WAS PLACED OVER THE OIL LINES FOR ADDED PROTECTION.

FINAL INSTALLATION.
