

## By-Pass Filter Installation

### 2006 Ford F-250

AMSOIL Single Remote Filtration System

Submitted by Mike Dunn

This AMSOIL Single Remote By-Pass Filtration System (BMK21) was installed on a 2006 Ford F-250 XLT Super Duty equipped with the 6.0L PowerStroke Diesel. The by-pass filter is mounted to a custom-made bracket alongside the coolant filter. The bracket is attached to the side of the alternator. I elected to have braided stainless teflon oil lines made rather than use the oil lines that came with the kit. The truck uses an EaBP100 by-pass oil filter and AMSOIL 15W-40 Synthetic Heavy Duty Diesel and Marine Motor Oil. Oil capacity increased to about 17 quarts from 15, and the installation took about 1.5 hours.

INSTALLATION FEATURES CUSTOM BRAIDED STAINLESS TEFLON OIL LINES. TRUCK ALSO USES A COOLANT FILTER (RED).
