

2007 Dodge 6.7L Cummins Diesel

AMSOIL Remote By-Pass Filter System

Submitted by AMSOIL Customer Myron Horvath

It took a bit of thought to get the unit to fit under the hood and still be able to service the unit easily. The installation was not as easy as installations on any of the 5.9L Cummins Dodge trucks. The EGR stuff on these engines make things a lot busier under the hood and space is at a premium. I designed a bracket that allows the unit to nestle down between the fan-shroud bracket and the air intake right behind it, still allowing easy access to the power steering reservoir and fuel pump below it. The 7.5 inch telescopic feature allows easy filter changes and the ability to get a container under the filter to catch the used oil.
