

2007 Chevy 5.3L Silverado

AMSOIL Dual Remote Filtration System
Submitted by AMSOIL Dealer Jim Williams

I welded the mounting bracket to the body. The bracket was cut down on the short part of the "L" and then v-cut near the bend and welded to allow for clearance of the hoses at the transfer case. I then touched it up with undercoating. I clamped the hose to the transmission in order to assure clearance at the driveshaft. I added a 45-degree fitting for clearance. The most challenging part of the install was that the adapter (BK 299) did not fit into this space because the adapter and the oil pan taper in opposite directions. To remedy this issue, I used a belt sander to remove material from the adapter (approximately 180 degrees around it to the depth indicated by the ruler).
