

By-Pass Filter Installation

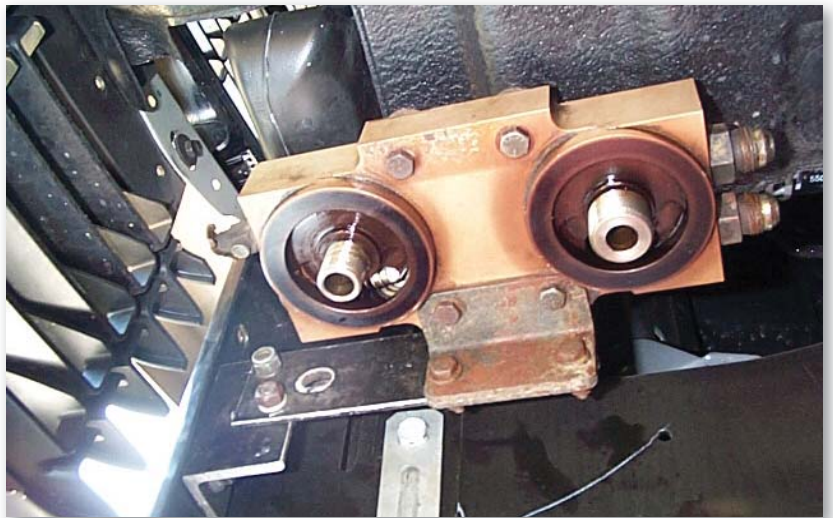

2010 Dodge Ram 2500

AMSOIL By-Pass Filtration System

Submitted by Ken Kerkman

This by-pass unit is installed on my 2010 Dodge Ram 2500 5.7L Hemi. It's been used on several different vehicles, which explains its aged appearance. I used two pieces of angle iron to fasten the unit next to the grill on the right side above the bumper. The upper bolt passes through a factory-drilled hole; I had to drill and tap a hole for the lower bolt. The oil line runs straight to the adapter on the engine. System capacity is now about nine quarts.

TWO PIECES OF ANGLE IRON WERE USED TO ATTACH THE BY-PASS UNIT.
