

## EaO-88 Filters Now Compatible with Ford 6.0 L Power Stroke By-Pass System and AMSOIL BK-1101 By-Pass Components

The AMSOIL EaO-88 filter has been redesigned to accept both AMSOIL and Oil Guard aluminum billet by-pass components, allowing Ford Power Stroke™ 6.0L diesel drivers to take advantage of the benefits and added protection of by-pass filtration alongside the world's first full-synthetic cartridge-style filter. These filters are available now, and replaced the existing stock of EaO-88 filters that were not compatible with this vehicle format.

To ease installation of the BMK-11 on 2003 and later model Ford pickups equipped with the 6.0L Power stroke™ diesel engine, AMSOIL provides the new Aluminum Billet Oil Filter Cap (BK-1101), the Aluminum Billet Oil Fill Cap (BK-1102) and the 90-degree JIC Elbow (BP-242). These new high-quality billet aluminum caps replace the original equipment manufacturer (OEM) filter cap and oil fill cap. The new caps have holes tapped in them that accept the JIC elbows for hose connectors.

### EaO-88B Filters Now Available at Reduced Cost

AMSOIL INC. will be liquidating stock on the EaO-88B filter line. These filters are compatible with Ford Power Stroke™ 6.0L diesels, however they are not compatible with aftermarket by-pass filtration systems or the AMSOIL BK-1101 By-Pass system. The EaO-88B filter has been reduced in price by \$2.00 while supplies last.
