

COLD-WEATHER SUPERIORITY

Test results describe and represent properties of various diesel fuel additives that were purchased and tested between August 2008 and January 2009. Results do not apply to any subsequent reformulations of such additives or to new additives introduced after completion of testing.

When diesel fuel surpasses its cold filter-plugging point (CFPP), the wax crystals that form clog the fuel filter and starve the engine of fuel, preventing it from starting. AMSOIL Diesel Recovery lowers the CFPP of diesel fuel better than the competing brand. It quickly and effectively dissolves the wax crystals that have formed in untreated fuel to get trucks moving again, making it a necessity for operators in cold climates.

Cold Filter-Plugging Point (CFPP)

ULSD = Ultra-Low-Sulfur Diesel, **B2** = 2% Biodiesel, **B5** = 5% Biodiesel
